LEARNING OBJECTIVES

- ✓ Understand the anatomy and physiology essential for implant placement.
- ✓ Identify various types of implants, materials, and their appropriate clinical applications.
- ✓ Learn preoperative assessment and patient selection criteria for successful implant outcomes.
- ✓ Gain familiarity with surgical protocols and techniques for implant placement.
- ✓ Explore the role of digital tools and imaging in implant planning.
- ✓ Develop strategies for managing potential complications and ensuring long-term stability.

This lecture is designed to equip dental professionals with the knowledge and confidence needed to integrate dental implants into their practice successfully.
